The invention provides 53010 nucleic acids, antisense CC molecules, expression vectors, host cells, transgenic animals, 53010 CC proteins, fusion proteins, antigenic peptides, anti-53010 antibodies and CC methods for detecting the presence of 53010 polypeptides or nucleic coids, of identifying a compound that binds to the 53010 polypeptide, and CC of modulating the activity of the polypeptide. The 53010 polypeptides and CC controlling disorders involving aberrant or deficient hydrolysis of CC carboxylic seters. As 53010 mRNA is highly expressed in the central and CC peripheral nervous system, and its expression is regulated in some rodent CC pain models, 53010 molecules can also act as novel disgnostic targets and CC crelated disorders. A claimed method of treating or preventing a disorder CC (especially a pain-related disorder) characterised by aberrant activity compound that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          surrogate

The present invention describes the use of polypeptides related to urological disorders for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Also described: (1) a method for identifying a compound capable of treating a urological disorder; (2) a method for identifying a subject having a urological
                                                                                                                                Use of polypeptides related to urological disorders, e.g. 21s or for identifying a compound capable of treating a ur disorder or identifying and treating a subject having a utdisorder.

The compound has uropathic and cytostatic activities. The polypeptides related to urological disorders are useful for identifying a compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological disorder. Disorders include urinary incontinence and benign prostatic hyperplasia. The present sequence represents a human urological disorder related protein, which is used in the exemplification of the present

Claim 1(a); Page 312-313; 335pp; English.

The invention relates to an isolated polypeptide with signal sequences countries and in the polypeptides of the invention may be described as, or encorated. The cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, nootropic, cardiant, antiulcer, virucide, antithyroid, cerebroprotective, anorectic, cardiant, antiulcer, virucide, antithyroid, carebroprotective, anorectic, cardiant, antiulcer, virucide, antithyroid. carebroprotective, anorectic, cardiant, antiulcer, or as a vaccine in the prevention of, cancer, cardind healing disorders, infection, atherosclerosis, Parkinson's disease inflammation, neoplastic diseases, nervous system related disorders, and cardiovascular disorders, pancreatitis, respiratory disorders, and cardiovascular disorders, pancreatitis, respiratory disorder, paper immunity, cardiovascular diseases, metrone disease, hyper-immunity, cardiovascular diseases, metrone disease, hyper-immunity, cardiovascular diseases, metrone antitis, cone photo-transduction deficiency, neurological diseases, sparm dysfunction, thyroid disorders e.g. hypothyroidiam, brain damages, colitis, cone photo-

CC The invention relates to an isolated human drug metabolising enzyme (DME)
CC and its nucleotide. DME is useful for diagnosing, treating or preventing
CC disorders associated with aberrant expression of DME, where the disorders
CC are selected from autoimmune/inflammatory disorder such as acquired
CC immunodeficiency syndrome (AIDS), asthma, atherosclerosis, psoriasis,
CC cirrhosis, hepatitis, and cancer; a neurological disorder such as
CC Alrheimer's disease, Huntington's disease, dementia, Parkinson's disease;
CC alevelopmental disorder such as renal tubular acidosis, epilepsy,
CC anaemia; an endocrine disorder such as adenoma, thrombosis and infections
CC is an eye disorder such as conjunctivitis, glaucoma, cataract; metabolic
CC disorder such as cystic fibrosis, diabetes and goitre; a gastrointestinal
CC disorder such as cystic fibrosis, diabetes and sorders. DME is
CC useful in a number of drug screening techniques and to analyse the
CC proteome of a tissue or cell type. The invention is useful for creating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          prevention or neurological,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sanjanwala MM,

                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorders, developmental disorder, endocrine CC disorder, neurological disorders, gastrointestinal disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in CC the printed specification, but was obtained in electronic format directly CC from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV Mooney EM, Delegeane AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin Peralta CH, Anderson SB, Rioux P, Shen BJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirtor Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, Gi Patury S, Shi X, Suarez CJ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                           The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                     New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                           Sequence

New isolated NOVX polypeptide useful for treating atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease and cancer.

Claim 1, Page 303; 666pp; English.

The invention relates to human polypeptides, termed NOVX, and the polypurcleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, articles, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subsortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, parkinson's disease, immune disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABUS4542-ABUS4647 represent human NOVX polypeptides invention

The invention may be useful for the development of compounds with a cytostatic, immunosuppressive, cc antiinflammatory, endocrine, ophthalmological, gastrointestinal or cc hepatotropic activity acting as an agonist or antagonist of drug cc metabolising enzyme activity. The invention may be used in the diagnosis cc and treatment of disorders associated with decreased or increased cc expression or activity of drug metabolising enzymes. Such disorders cc include cancer, cell proliferative disorders, autoimmune/inflammatory, endocrine, eye, gastrointestinal (including liver disorders) and cc metabolic disorders. The present sequence is that of a human drug metabolising enzyme (DME) of the invention. Note: This sequence did not form part of the printed specification but was obtained in electronic commant from EPO.

The invention discloses a polynucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide CC or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide CC peptide of the polynucleotide by contacting the polypeptide or peptide CC with the antibody of the encoded protein, and observing the binding CC with the antibody of the encoded protein, and observing the binding CC sequence the two, a transformant carrying the polynucleotide in an CC expressible manner and an antisense polynucleotide. The oligonucleotide genessible manner for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The oligonucleotide CC genes may be included in them, for developing a diagnostic marker or compression are useful as pharmaceutical agents and many disease-related CC genes may be included in them, for developing a diagnostic marker or compression. The genes are involved in tissue and/or cell considered the polynucleotide in a targets of gene therapy. The genes are involved in tissue and/or cell transcription-related proteins, signal transduction-related proteins, conservation, and activity, or as targets conservation, diseases (e.g. osteoporosis, conservation) and cativity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed consequence data for this patent is not represented in the printed consequence information supplied by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                몽
The present sequence represents a cat cauxin protein (I) or its salt, which is cat kidney disease marker. Also described: (1) a partial peptide (II) of (I); (2) a nucleic acid (III) encoding (I) or (II); (3) a vector (IV) comprising (III); (4) a transformed host (V) comprising (III) or (IV); (5) producing (I) or (II) by culturing (V); (6) a antibody (VI) which couples specifically with (I) or (II); (7) diagnosing cat kidney disease which involves measuring (I) quantitatively, and where reduction of amount of (I) indicates presence of the disease; (8) a cat kidney disease diagnostic agent comprising (I) labelling agent, a reagent which measures the biological activity of urinary (I) or (VI); and (9) a cauxin
                                                                                                                                                                                                                                Novel cauxin protein or its salt, useful and for diagnosing cat kidney disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          detection kit which measures cauxin in a test sample. (I) is useful cat kidney disease marker and (VI) is useful for disgnosing cat kidney disease. (I) enables detection of cat kidney disease simply and correctly. (I) provides an early marker for the disease, and replace complicated diagnostic methods such as X-ray imaging, ultrasonic imaging the discass.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 542 AA;
